2.4.1 In General

A Customer may transmit or receive information or signals via the facilities of the Company.

2.4.2 Station Equipment

2.4.2.1 The Customer is responsible for providing and maintaining any terminal equipment on the Customer premises. The electric power consumed by such equipment shall be provided by, and maintained at the expense of, the Customer. All such terminal equipment must be registered with the FCC under 47 C.F.R., Part 68 and all wiring must be installed and maintained in compliance with those regulations. The Company will, where practicable, notify the Customer that temporary discontinuance of the use of a service may be required; however, where prior notice is not practicable, nothing contained herein shall be deemed to impair the Company's right to discontinue forthwith the use of a service temporarily if such action is reasonable under the circumstances. In case of such temporary discontinuance, the Customer will be promptly notified and afforded the opportunity to correct the condition which gave rise to the temporary discontinuance. During such period of temporary discontinuance, credit allowance for service interruptions as set forth in Section 2.6 following is not applicable.

3.12.1 XO Corporate Long Distance Plan

XO Corporate Long Distance Plan is a long distance calling plan available to Customers who subscribe to Company's local or long distance facilities-based service. Customer subscribes to a monthly long distance revenue commitment level. Usage for domestic interstate dedicated and switched service and intrastate dedicated and switched service contribute to the Customer's commitment level. The commitment level subscribed to by the customer will determine the per minute rate billed to the Customer. Customers must subscribe to this service for a minimum of one year.

The following sections will apply to customers who are served by a Central Office where the former Allegiance Telecom of New York, Inc. has facilities and to existing Customers of XO Communications Services, Inc. as of February 19, 2005.

Category Two - Sections 3.13 thru 3.24

(T)

3.13 IntraLATA Toll Service

IntraLATA toll service is furnished for communication between telephones in different local calling areas within a particular LATA in accordance with the regulations and schedules of charges specified in this tariff. The toll service charges specified in this section are in payment for all service furnished between the calling and called telephone, except as otherwise provided in this Tariff.

IntraLATA toll calling includes the following types of calls: direct dialed, collect, 3rd number billed, special toll billing, requests to notify of time and charges, person to person calling and other station to station calls.

3.13.1 Classes of Calls

Service is offered as two classes: station to station calling and person to person calling.

3.13.1.1 Station to Station Service is that service where the person originating the call dials the telephone number desired or gives the Company operator the telephone number of the desired telephone station or system.

3.13.1.2 Person to Person Service is that service where the person originating the call specifies to the Company operator a particular person to be reached, a particular mobile unit to be reached, or a particular station, department or office to be reached. The call remains a person to person call when, after the telephone, mobile telephone, or PBX system has been reached and while the connection remains established, the person originating the call requests or agrees to talk to any person other than the person specified, or to any other agreed upon alternate.

3.13.2 Timing of Calls

Unless otherwise indicated, all calls are timed in one minute increments and all calls which are fractions of a minute are rounded up to the next whole minute.

For station to station calls, call timing begins when a connection is established between the calling telephone and the called telephone station.

For person to person calls, call timing begins when connection is established between the calling person and the particular person, station or mobile unit specified or an agreed alternate.

Call timing ends when the calling station "hangs up," thereby releasing the network connection. If the called station "hangs up" but the calling station does not, chargeable time ends when the network connection is released either by automatic timing equipment in the telephone network or by the Company operator.

Calls originating in one time period as defined in Section 3.13.3 and terminating in another will be billed the rates in effect at the beginning of each minute.

3.13.4 Regulations and Computation of Mileage

Calls for which rates are mileage sensitive are rated on the airline distance between the originating rate center and the terminating rate center.

A. Originating Rate Center

A Customer's primary local exchange number includes an NXX code that is associated with a specific rate center. The originating point of all calls charged to that Customer's account shall be the location of the Customer's rate center.

B. Terminating Rate Center

The terminating point for all calls shall be the location of the local rate center associated with the called number.

C. Calculation of Mileage

Usage charges for all mileage sensitive products are based on the airline distance between serving wire centers associated with the originating and terminating points of the call. The serving wire centers of a call are determined by the area codes and exchanges of the origination and destination points.

The distance between any two rate centers is determined as follows:

3.13.4 Regulations and Computation of Mileage, (Cont'd)

Airline mileage, where mileage is the basis for rating calls, is obtained by using the "V" and "H" coordinates assigned to each rate center and contained in NECA FCC Tariff No. 4 or successor tariffs. To determine the airline distance between any two locations, proceed as follows:

1. Obtain the "V" and "H" coordinates for each location. The "V" coordinate is the first four digits in the "VH" column. The "H" coordinate is the next four digits.
2. Obtain the difference between the "V" coordinates of each of the locations. Obtain the difference between the "H" coordinates.
3. Square each difference obtained in step b., above.
4. Add the square of the "V" difference and the "H" difference obtained in step c., above.
5. Divide the sum of the square by 10. Round to the next higher whole number if any fraction is obtained.
6. Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
