INTRASTATE SWITCHED ACCESS SERVICES TARIFF

SECTION 2 - RULES AND REGULATIONS (CONT'D.)

2.3 Customer Reporting

Customers may be required to provide certain reports in connection with the provision of access service.

2.3.1 Jurisdictional

When a Customer orders Access Service, its projected Pill must be provided in whole numbers to VT. These whole number percentages will be used by VT to apportion the use and/or charges between interstate and intrastate until a revised report is received as set forth herein. Reported or default Pill factors are used only where the call detail is insufficient to determine the appropriate jurisdiction of the traffic. The jurisdictional reporting is as follows:

- A. Originating Access: Originating access minutes is only traffic originating from VT Local Switching Center(s). The Customer should provide VT with a projected Pill factor on a quarterly basis. If no Pill for originating minutes is submitted as specified herein, then the projected Pill will be set on a default basis of 50% interstate traffic and 50% intrastate traffic.
- B. Terminating Access: For Feature Group D Switched Access Service(s), the Customer should provide VT with a projected Pill factor by supplying VT with an interstate percentage of terminating access minutes on a quarterly basis, as described herein. If no projected PIU factor is submitted by the Customer, then the projected PIU will be set on a default basis of 50% interstate traffic and 50% intrastate traffic.
