

PSC NO: 119 ELECTRICITY
NEW YORK STATE ELECTRIC & GAS CORPORATION
Initial Effective Date: 04/01/2012
Issued in compliance with order dated June 22, 2011 in Case 11-E-0112

Leaf: 16
Revision: 2
Superseding Revision: 1

GENERAL INFORMATION

2. How Service May Be Obtained: (Cont'd.)

C. Underground Extensions for New Residential Subdivisions: (Cont'd.)

(4) Contributions:

Where the installation of electric facilities is required to serve a residential subdivision or approved section thereof or to serve a multiple occupancy building, a deposit subject to complete or partial refund will be required.

The Corporation will accept from a non-residing applicant, before construction is begun, a deposit equal to the Corporation's portion of the total estimated cost of construction. This deposit is in addition to the applicant's payment of its share of costs for installation. The deposit will be refunded to the applicant, with interest (at the consumer deposit rate), at the rate of up to 100 feet per dwelling unit or the actual footage required per dwelling unit based upon the original subdivision plan, whichever is lower, as meters are set for each dwelling unit. The total amount refunded shall not exceed the total original deposit. However, any portion of the deposit remaining unrefunded five years from the date the Corporation is first ready to render service from the underground electric distribution lines, will be retained by the Corporation. Upon mutual agreement of both the Corporation and applicant, a bond may be posted in lieu of any deposit.

A non-residing applicant for underground service to a residential subdivision has the option to do his own trenching, or have it done, and receive payment from the Corporation for the amount per foot specified in the Statement of Underground Residential Distribution Contribution (URD Statement). For any excavation work done by the applicant, the Corporation may charge a fee to inspect the applicant's work and insure compliance with Corporation specifications.

In cases where the applicant has purchased a lot within a subdivision and the developer of the subdivision is not primarily engaged in the construction of dwelling units within the subdivision and has not applied for the extension of electric distribution lines in a subdivision which is required to have underground service, the Corporation will install underground distribution lines to serve an applicant who is the purchaser of a lot within the subdivision and to other areas of the subdivision as may be dictated by considerations of efficiency and economy and will charge the applicant for his pro rata share of applicable charges. As additional applicants apply for service and utilize the distribution lines installed to serve a prior applicant the Corporation will charge the additional applicant for his pro rata share of the distribution lines as allowed in 2.B.(3).

(5) Service Connection:

The Corporation will designate the service connection point to a building or to a multiple-occupancy building and the point at which the service lateral will connect to the Corporation's electric distribution lines or equipment. Each service lateral within the lot line and running to each building will be installed by the applicant in accordance with the Corporation's specifications.
