## LOCAL EXCHANGE SERVICES

---

### SECTION 15 - GRANDFATHERED SERVICES II, (Cont'd.)

#### 15.2 Business Network Switched Services, (Cont'd.)

##### 15.2.2 Service Descriptions, (Cont'd.)

#### E. Integrated Services Digital Network Primary Rate Interface

##### 1. Basic Description

Integrated Services Digital Network Primary Rate Interface (PRI) is an optional service that will allow customer-provided PBX equipment to interface with the Company's switching equipment over DS1 trunks for voice transmission. Basic Business Network Switched Service as well as Direct Inward Dialing (DID) and Direct Outward Dialing (DID) will be offered on PRI trunks. Existing local usage rates or MTS rates will apply to voice transmission carried over a PRI circuit.

PRI uses one of the following Integrated Services Digital Network (ISDN) architectures:

- 23 B-Channel and one D-Channel.
- 24 B-Channels (Note: 24 B-Channel PRI trunks can only be used in conjunction with 23 B/1 D-Channel PRI trunks. One D-Channel must be available for signaling).

The B-Channel is a 64 Kilobits per second channel used for information transfer between users. The D-Channel is a 64 Kilobits per second channel that carries signaling and control for the B-Channels.
