ACCESS SERVICES TARIFF

---

SECTION 6 - SWITCHED ACCESS SERVICE (CONT'D.)

6.2 Functional Components of Service (Cont'd.)

6.2.4 Local Switching Optional Features - Common Switching (Cont'd.)

C. Automatic Number Identification (ANI) - Switched access service offering the optional feature, ANI, is provided under this tariff only to Cable TV companies for then sole purpose of facilitating billing for such companies and for Interexchange Carriers.

1. ANI provides the automatic transmission of a seven or a ten digit number and information digits to the customer's premises for calls originating in the LATA, to identify the calling station. The ANI feature is an end office software function which is associated on a call by call basis with all individual transmission paths in a trunk group routed directly between an end office and a customer's premises; or where technically feasible, with all individual transmission paths in a trunk group between an access tandem and a customer's premises. Where ANI cannot be provided, (e.g., on calls from four-and party services), information digits will be provided to the customer.
2. The seven digit ANI telephone number is available with FGB. With this feature group, technical limitations may exist in Company switching facilities which require ANI to be provided only on a directly trunked basis. ANI will be transmitted on all calls except those originating from multiparty lines and public telephone service lines using FGB or when an ANI failure has occurred. The ten digit ANI telephone number is available with FGD provided multifrequency address signaling. The ten digit ANI telephone number consists of the NPA plus seven digit ANI Telephone number.
