SECTION 4 - DEDICATED SERVICES DESCRIPTIONS AND TECHNICAL STANDARDS,
(CONT'D.)

4.4 Service Descriptions And Technical Specifications, (Cont'd.)

4.4.2 Digital Data Service (DDS), (Cont'd.)

A Digital Data Channel is a channel for duplex four-wire transmission of synchronous serial data at rates of 2.4, 4.8, 9.6, 19.2, 56, or 64 Kbps. The actual bit rate is a function of the channel interface selected by the Customer. The channel provides synchronous service with timing provided by Carrier, through Carrier facilities to the Customer in the received bit stream. Digital Data channels are provided only between Customer designated locations and/or between Customer designated locations and a Carrier's hub.

Specific service offerings and rates will be defined by individual-case basis arrangements (ICB).
