RESOLD LOCAL AND INTEREXCHANGE TELECOMMUNICATIONS TARIFF

SECTION 4 - DIGITAL DATA SERVICE (CONT'D.)

4.6 ISDN Basic Service and Virtual Serving Arrangement – General (Cont'd.)

4.6.1 Service Description, (Cont'd.)

D. Optional Features (cont'd.)

3. Packet Switching Service (Cont'd.)

The following features are available with High or Low Speed Packet Switched Service capabilities:

- a. Permanent Virtual Circuits - Allows the Customer to establish a logical channel between two digital service lines equipped for packet service.
- b. Additional Virtual Circuits - Those circuits that the Customer subscribes to that are in addition to the initial virtual circuit (logical channel) provided with the HSPSD or LSPSD basic service capability on one digital subscriber line. Additional virtual circuits are provisioned as switched virtual circuits unless the Customer specifies that they are to be permanent virtual circuits, in which case the rates for permanent virtual circuits would apply.
- c. Closed User Group - Provides the Customer with the capability to form closed sub-networks within the Customers' group of ISDN terminals and thus control user access.
- d. Flow Control Parameter Negotiation - Permits negotiations on a per call basis of the flow control parameters (window size and packet size).
