RESOLD LOCAL AND INTEREXCHANGE TELECOMMUNICATIONS TARIFF

SECTION 4 - DIGITAL DATA SERVICE (CONT'D.)

4.6 ISDN Basic Service and Virtual Serving Arrangement – General (Cont'd.)

4.6.1 Service Description, (Cont'd.)

D. Optional Features (cont'd.)

4. Modem Pool (Customer Premises) - This capability provides for the setup and clearing of data calls between a ISDN Basic Service Customer and a local exchange line utilizing a modem for data transmission. The data connection is established by routing the call through a digital service line of the modem pool (modem and terminal adapter provided by the Customer) to perform the necessary analog-to-digital or digital-to-analog conversion.

Two lines are required for each modem in a modem pool: an ISDN Basic Service line and an analog line.

Each ISDN Basic Service line equipped for modem pooling will include the following features:

- a. Closed User Group - Provides the Customer with the capability to form closed sub-networks within the modem pool, and thus control access to the modem pool.
- b. Packet Switched Multiline Hunt Group - Provides ISDN Basic Service users with hunting into the modem pool.

The following option is available to modem pool Customers:

- I. Terminating Access Directory Telephone Number - A directory number which may be used by ISDN Subscribers who wish to receive data calls from on-ISDN subscribers via modem pooling. This number can be used only for terminating data calls to a particular ISDN Basic Service line via the modem pool.
