NY PSC No. 5 – Access   Revision 1
Initial Effective Date: August 5, 2012   Superseding Revision 0

ACCESS SERVICES

SECTION 2 - TERMS AND CONDITIONS, (CONT'D.)

2.17   Jurisdictional Reporting and Identification of Toll VoIP-PSTN Traffic, (Cont'd.)

2.17.3 Identification of VoIP-PSTN Traffic, (Cont'd.)

A.   Calculation and Application of Percent-VoIP-PSTN-Usage Factors, (Cont'd.)

1.   The Customer will calculate and furnish to the Company a factor (the
        "PVU-A") representing the percentage of the total intrastate access MOU   (T)
        that the Customer exchanges with the Company in the State, that (a) is
        terminating access sent to the Company and that originates in IP format;   (T)
        or (b) is originating access received from the Company and terminates in |
        IP format until August 5, 2012 and after June 30, 2014. This PVU-A   (T)
        shall be based on information such as the number of the Customer's retail
        VoIP subscriptions in the State (e.g., as reported on FCC Form 477),
        traffic studies, actual call detail, or other relevant and verifiable
        information.

2.   Company will, likewise, calculate a factor (the "PVU-B") representing
        the percentage of the Company's total intrastate access MOU in the State   (T)
        that the Company originates or terminates in IP format. From August 5, |
        2012 through June 30, 2014, the PVU-B will represent only terminating |
        access MOU. This PVU-B shall be based on information such as the   (T)
        number of the Company's retail VoIP subscriptions in the State (e.g., as
        reported on FCC Form 477), traffic studies, actual call detail, or other
        relevant and verifiable information.

3.   The Company will use the PVU-A and PVU-B factors to calculate an
        effective PVU factor that represents the percentage of total intrastate   (T)
        access MOU exchanged between the Company and the Customer that is
        originated and/or terminated in IP format, whether at the Company's end,
        at the Customer's end, or at both ends. From August 5, 2012 through   (T)
        June 30, 2014, the PVU will represent only terminating intrastate access |
        MOU. The effective PVU factor will be calculated as the sum of: (A)   (T)
        the PVU-A factor and (B) the PVU-B factor times (1.0 minus the PVU-A
        factor).

4.   The Company will apply the effective PVU factor to the applicable   (T, M)
        intrastate access MOU exchanged with the Customer as described above, |
        to determine the number of relevant VoIP-PSTN Traffic MOUs.   (T, M)

        (M) – Certain material previously found on this leaf is now located on Leaf 36.2.
