GENERAL AND LOCAL EXCHANGE SCHEDULE

---

SECTION 3 - RATES, (CONT'D.)

(N)

3.8 Group Eight (Private Line Service) (cont'd)

3.8.2 Integrated Services Digital Network (ISDN) - Basic Rate Interface (BRI) (cont'd)

D. Optional Service Components: Descriptions and Definitions

Unless otherwise noted, all Special Calling Features and Supplemental Services described in General Exchange Tariff are available with ISDN-BRI at the same rates, terms and conditions specified in that tariff section. With subscription to an ISDN-BRI, the following Hosting options are available at the rates and charges set forth in this tariff (assuming appropriate digital telephone set(s) are used by the customer):

1. Analog Member in a Hunt Group - A feature that provides for an analog interface in an ISDN-BRI Hunt Group.
2. Custom Calling, Class Services and Voice Mail for Electronic Key Terminal Service (EKTS) - Circuit switched voice features (Call Hold, Call Forwarding Variable; Call Forwarding-Don't Answer; Call Forward-Interface Busy; Message Waiting Indication; Three-Way Conference Calling; Speed Call 30, etc.) as well as other Supplemental services can be added to enhance normal telephone use. These services are defined in Section 7 of the NYSTA No. 2 Tariff. Rates are supplied in this Company's PSC No. 3 Tariff, Section 3 (and Attachments).

A Basic EKTS terminal supports only one call appearance per telephone number. The Call Transfer Disconnect or the Call Forwarding features cannot be used to expand a local calling scope or to avoid any toll charges.

3. Hunt Group for CSD - This optional feature provides for a predefined search (circular, linear, uniform) for an idle directory number to which a circuit switched data call can be offered.
4. Hunt Group for CSV - This optional feature provides for a predefined search for an idle directory number within a designated group of lines. The sequence in which the search for the terminating lines is conducted is determined by the type of hunting feature chosen by the customer (e.g., circular, linear, uniform).
5. Hunt Group Transfer for CSD - This optional feature sends circuit switched data calls that terminate to a circuit switched data hunt group to a backup circuit switched data hunt group. The user must activate this feature in order for CSD to be sent to the backup group.
