C. Basic Service Components: Descriptions and Definitions (cont'd.)

14. (cont'd) To prevent this from occurring, Associated Groups may be defined. The first user is assigned to one Associated Group and the other user is assigned to a second Associated Group. Each Associated Group is allowed access to one B-Channel at any particular time. Both users are allowed access to the D-Channel. These capabilities are available without additional charge.
15. Network Component - The Company offers 12,000 minutes of B-Channel access to the PSTN via the Flat Rate Network Component. Additional minutes of access to the PSTN via B-Channels are offered through the Usage Sensitive Network Component. These rate elements provide central office switching capabilities, required to access the PSTN, and shall apply per B-Channel.
16. Public Switched Telephone Network (PSTN) - The worldwide telephone network available to telephone subscribers in the United States. It includes local dialing scope, home LATA, intrastate, and international locations. Access to PSTN is provided via the Flat Rate and Usage Sensitive Network Components.
17. Secondary-Only Telephone Number – A CSS option that allows any telephone number, other than the primary telephone number, to be assigned to an ISDN-BRI terminal. A Secondary-Only Telephone Number does not have to be a primary telephone number at another terminal. An ISDN-BRI terminal can have one or more Secondary-Only Telephone Numbers. Each Secondary-Only Telephone Number can have multiple call appearances. A Secondary-Only Telephone Number can be shared with another ISDN-BRI terminal.
18. Usage Sensitive Network Component - Measured rate element applicable to all B-Channel CSV and CSD calls that utilize the PSTN more than 12,000 minutes per month. This rate element applies per B-Channel minute of use beyond the Company's allotted number of hours of use and provides central office switching capabilities.
