SECTION 2.0 - RULES AND REGULATIONS (CONT'D.)

2.21 Emergency / Crisis / Disaster Restoration and Provisioning - Telecommunications Service Priority (Cont'd.)

2.21.1 General (Cont'd.)

- B.** The TSP program has two components, restoration and provisioning.
1. A restoration priority is applied to new or existing telecommunications services to ensure restoration before any other services during a service outage. TSP restoration priorities must be requested and assigned before a service outage occurs.
 2. A provisioning priority is obtained to facilitate priority installation of new telecommunications services during a service outage. Provisioning on a priority basis becomes necessary when an end-user has an urgent requirement for a new NS/EP service that must be installed immediately or by a specific due date that can be met only by a shorter than standard or expedited Company provisioning time frame. As a matter of general practice, existing TSP services will be restored before provisioning new TSP services.
