ACCESS SERVICE

6. SWITCHED ACCESS SERVICE (Cont'd)6.1 General (Cont'd)6.1.1 Feature Group Arrangements and Manner of Provision (Cont'd)(E) 800 Data Base Access Service (Cont'd)

For purposes of administering the rules and regulations set forth in this tariff regarding the provision of 800 Data Base Access Service, except where otherwise specified, the term 800 Data Base Access Service shall include any of the following NPAs: 800, 888, 877, 866, 855, 844, 833, and 822 as they become available to the industry.

When 800 Data Base Access Service is provided from an end office equipped with equal access capabilities (i.e., FGD), all such service will be provisioned as Feature Group D. When 800 Data Base Access Service is provided from designated electromechanical end offices, such service will be provisioned as Feature Group C or Feature Group D.

Unless prohibited by network considerations, e.g., different dialing plans, the customer's 800 Data Base Access Service traffic may, at the option of the customer, be combined in the same trunk group arrangement with the customer's other Access Service traffic of the same Switched Access Service Arrangement type or be combined in the same trunk group arrangement with the customer's 900 Access Service traffic of the same Switched Access Service Arrangement type with the following limitation. Combining 800 Data Base Access Service traffic with the customer's direct routed Switched Access Service Arrangements or 900 Access Service traffic of the same Switched Access Service Arrangement type will be allowed only when the end office is equipped to perform the customer identification function. When required by network considerations, a separate trunk group must be established for 800 Data Base Access Service.

(1) Call Handling and Destination Feature

The Call Handling and Destination Feature is available to 800 Data Base Access Service customers on an optional basis. This feature allows for the customer to create call processing logic for 800-NXX-XXXX dialed calls. In this manner the 800 Data Base Access Service can be customized to meet individual requirements. The feature may be used in combination with one or more routing options based upon customer specification and technical switch limitations.
