ACCESS SERVICE

6. SWITCHED ACCESS SERVICE (Cont'd)6.1 General (Cont'd)6.1.2 Rate Categories (Cont'd)(B) Local Switching

The Local Switching rate category provides the local end office switching and end user termination functions necessary to complete the transmission of Switched Access communications to and from the end users served by the local end office. The Local Switching rate category includes the Local Switching, Line Termination, Intercept, and Information (i.e., Directory Assistance) functions. Directory Assistance Service and the applicable rates for it are set forth in Section 9. following.

The Local Switching rate category is divided into two distinct categories, i.e., LS1 and LS2. The first category, LS1, provides local dial switching for Feature Group A. The second category, LS2, provides local dial switching for Feature Groups B, C and D.

The Shared End Office Trunk Port provides for the termination of Tandem Switched Transport and/or FGA access minutes to an end office. Access minutes for all Switched Access Service subject to the Shared End Office Trunk Port will be multiplied by the per minute rate set forth in 30.6 following.

A Transitional Per-Minute Charge will apply from July 1, 2012 through June 30, 2013 to all Transitional Intrastate Access Service end-office switching minutes, as defined in 47 C.F.R. 51.903(j). The charge will be eliminated July 1, 2013.

J

The STP Port rate provides for the point of termination to the Signal switching capability of the STP.

The Dedicated End Office Trunk Port provides for the termination of Direct Trunked Transport trunks at an end office. The Dedicated End Office Trunk Port rate, set forth in 30.6 following, applies per activated trunk for all trunkside services terminating at either analog or digital end offices.

Where end offices are appropriately equipped, international dialing may be provided as a capability associated with LS2. International dialing provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard FGC or FGD equipped end office.

Certain material formerly on this page now appears on 1st Revised Page 31.
