GENERAL INFORMATION

37. NET METERING FOR WIND ELECTRIC GENERATING EQUIPMENT (Continued)

37.6.2.3 For a customer-generator who has residential solar and wind generating equipment installed at the same location, the following net metering rules will apply:

37.6.2.3.1 If both the solar and wind generating equipment are both 10 kW or less, the Company shall credit the generation produced as a credit to the next bill for service to the customer-generator for the net electricity provided at the same rate per kilowatt hour applicable to service provided to other customers in the same service class who do not generate electricity.

37.6.2.3.2 If wind generating equipment is between 10 kW and 25 kW, the Company shall credit the generation produced as a credit to the next bill for service to the customer-generator for the net electricity provided at the Company's avoided cost, as calculated under Special Provision C of S.C. No. 6 of this Tariff.

37.6.2.3.3 The customer-generator is responsible for all costs associated with installing, maintaining and operating the residential and farm service wind electric generating systems.

37.6.2.3.4 The difference at the end of 12 months or annualized over the period that service is supplied by means of net energy metering, the Company shall issue payment at avoided cost for any remaining credit for the excess electricity produced during the year or over the annualized period by the customer-generator.

37.7 In the event that the total rated generating capacity of residential and/or farm service electric wind generating equipment that provides electricity through the same local feeder line exceeds 20 percent (20%) of the rated capacity of the local feeder line, the Company may require the customer to comply with reasonable measures to ensure the safety of the local feeder line.

37.8 Wind customers may not offset metering credits against bills for usage metered at locations other than the net metering delivery point.
