

PSC No: 19 - Electricity
Rochester Gas and Electric Corporation
Initial Effective Date: July 1, 2009

Leaf No. 160.39.5
Revision: 0
Superseding Revision:

GENERAL INFORMATION

17. Electric Hybrid Generating System Option

Applicable to any customer who owns or operates two types of electric generating equipment as defined in General Information Section 13, 14, 15, or 16 of this Schedule at the same location ("Hybrid Facility"). The Hybrid Facility Option is intended to allow hybrid facilities the benefit of net metering for qualified generation.

Customers electing service under this Section must operate in compliance with standards and requirements set forth in the Distributed Generation Interconnection Requirements found in PSC 19 - Electricity, Section 10 and Addendum-SIR to PSC 19. In addition, customers must execute the NYS Standardized Contract for Interconnection of New Distributed Generation Units with Capacity of 2 MW or Less Connected in Parallel with Utility Distribution Systems ("SIR Contract"), as contained within Addendum-SIR of PSC 19 - Electricity.

Metering

The Corporation will install metering appropriate for the customer's service classification that enables the Corporation to measure the electricity delivered to the customer and measure the qualified electricity supplied by the customer to the Corporation. Billing, netting or compensation for generation will be consistent for the qualified generation as defined in General Sections 13, 14, 15 and 16. Where the Corporation determines additional meters should be installed, no additional meter costs shall be billed to the customer. When a second meter is requested by the customer that is not required by the Corporation, the customer will be responsible for additional costs.
