## SECTION 7 - AT&T LOCAL EXCHANGE SERVICES - DESCRIPTIONS

### 7.22 ALS DIGITAL TRUNKS

Digital Trunks service is a fractional digital switched service that provides trunk connections from an end user's Private Branch Exchange or capable Key System to the Company Switch Port. Digital Trunks service is delivered via a DS-1 (1.544 Mbps) facility providing up to 23 voice-grade DSO communications channels.

The customer may opt to utilize Digital Trunks service for outgoing calls only (DOD), incoming calls only (DID), or a combination of both inbound and outbound calls. When the customer elects to utilize Digital Trunks service for both inbound and outbound calls, they may choose Two-Way service which allows incoming calls to an attendant only or they can elect to utilize DID/DOD service which allows incoming calls to be terminated directly to an end user behind a PBX or capable Key system. When DID or DID/DOD service is ordered, direct inward dialing (DID) numbers must be purchased from the Company. Per subscribed Rate Center, the customer is required to subscribe to a sufficient number of trunks or channels so as not to degrade the Company's network below an incoming call completion rate of 99%. The call completion rate is based on an average of the busy hours occurring during the customer's busiest hours during the billing cycle. Once the service has been established, the Company may require the customer to increase the number of trunks or channels to satisfy the call completion criteria listed above.

Refer to the PRICE LIST for rates and charges.
