SECTION 7 - AT&T LOCAL EXCHANGE SERVICES - DESCRIPTIONS

7.2 FEATURES (Cont'd)

7.2.1 General (Cont'd)

- K. Anonymous Call Rejection- (ACR) This feature allows the subscriber to automatically reject calls from callers who block delivery of their name or telephone number. Customers activate Anonymous Call Rejection by pressing *77. Customers cancel ACR by pressing *87. It does not block calls from numbers that are unavailable.

Blocked calls or calls marked private are routed to an announcement that will indicate that the called party is not accepting calls from parties with private numbers. Anonymous Call Rejections will be automatically provisioned (free of charge) to all AT&T Local Service Caller ID services customers.

- L. Caller ID with Name - This feature permits the display of a listed name associated with telephone number from which the call is being made. The name and number will be delivered to a customer-provided display device.
- M. Caller ID with Call Waiting - This feature provides customers the ability to see the number or the name of the calling party while engaged in a telephone conversation. Customers must subscribe to both Caller ID and Call Waiting features. When customers subscribe to Caller ID with Call Waiting, they receive the functionality of both Call Waiting and Caller ID along with an alert signal indicating that another caller is attempting to call. There is no additional charge for Caller ID with Call Waiting.
- N. Distinctive Ring Service - This feature enables the customer to have two telephone numbers assigned to a single analog line. Each telephone number will have a unique ringing pattern. Customers have the option of having the additional telephone number listed in the directory.
- O. Remote Access to Call Forwarding (RACF) - This feature allows a customer to activate/deactivate the automatic transfer of their incoming calls to another telephone number. Users subscribing to RACF must also have or subscribe to Call Forward Variable feature. RACF requires a local dial-in telephone number be provided to the customer. Customer uses a four-digit PIN to access the call-forwarding feature. The user gains remote access to the Call Forward Variable feature from a touch-tone telephone at a remote location.
