SECTION 20 – AUDIO-TELECONFERENCE BRIDGE

20.1 GENERAL

Conference Service is the furnishing of telecommunications between a calling station and one or more called stations. Conference Service is available as a Customer Dialed service (see AT&T Business Service Guide) or an Audio-Teleconference Bridge, which provides the capability for voice and or/data conferencing (see AT&T Business Service Guide - Audio-Teleconference Bridge). In addition to regulations in P.S.C. No. 23 - Telephone, the following also apply to Conference Services.

20.2 DESCRIPTION

Audio-Teleconference Bridge (ATB) provides the capability to establish a teleconference between multiple voice stations. The teleconference may utilize voice transmission as described in 20.5 following.

A Customer with TOUCH-TONE signaling, or its equivalent, can either establish and control the teleconference or elect to have the teleconference established through an operator. After the call is established, control of the teleconference is transferred from the operator to the Customer. A Customer with rotary signaling must use the operator to establish the teleconference, and will not have access to the control features of this service. Conferees may have either rotary or touch type telephones.

20.3 TYPES OF AUDIO-TELECONFERENCE BRIDGE

- A. Demand - A Customer may establish a teleconference by calling a specified telephone number at any time.
- B. Reservations - A Customer may reserve a teleconference up to two months in advance of the desired teleconference time.
- C. Meet-Me - A Customer may establish a teleconference by having each conferee call a specified telephone number.
