SECTION 3 - SWITCHED ACCESS SERVICE, (CONT'D.)

3.8 Rate Regulations (Cont'd.)

3.8.3 Measurement of Access Minutes

- (D)
- (D)
- (T)
- (T)
- (T)
- A. When recording originating calls over Switched Access Service with SS7/SIGTRAN signaling, usage measurement begins with the transmission of the initial address message by the switch for direct trunk groups and with the receipt of an exit message by the switch for tandem trunk groups. The measurement of originating Switched Access Service usage ends when the entry switch receives or sends a release message, whichever occurs first.
  - B. For terminating calls over Switched Access Service with SS7/SIGTRAN signaling, the measurement of access minutes begins when the terminating recording switch receives the initial address message from the terminating End User. On directly routed trunk groups or on tandem routed trunk groups, the Company switch receives the initial address message and sends the indication to the Customer in the form of an answer message. The measurement of terminating Switched Access Service call usage ends when the entry switch receives or sends a release message, whichever occurs first.
  - C. Mileage, where applicable, will be measured in accordance with standard industry practices.
