

BELLSOUTH LONG DISTANCE, INC.d/b/a AT&T Long Distance Service
New York Tariff No. 3 - Telephone
Effective Date: April 3, 2011Section 3
Leaf No. 4
Revision: 0
Superseding Revision:**SECTION 3 - GENERAL DESCRIPTION OF SERVICE****3.4 Calculation of Distance**

For mileage sensitive services, the distance between originating and terminating points of a call or private line facility are determined using vertical ("V") and horizontal ("H") coordinates for the serving wire center(s) or Company access point(s) associated with the call or facility. For purposes of determining the airline mileage of a call the Company references the V and H coordinates as found in Telcordia's V&H Tape and NECA FCC Tariff No. 4. The use of coordinates for wire centers versus access points and the method for calculating actual distances varies based on the type of service and the form of access used to reach the Company network.

For non-switched private line services, mileage measurements are based on the distance in airline miles between the Company access points associated with each end of the circuit. Distance measurements are determined using the mileage calculation method shown in Section 3.4.1.

For outbound and inbound switched long distance services utilizing Switched Access Origination, mileage measurements are based on the airline distance between serving wire centers associated with the originating and terminating points of the call. The serving wire centers of a call are determined by the area codes and exchanges of the origination and terminating points. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2.

For outbound switched long distance services utilizing Special Access Origination, mileage measurements are based on the distance in airline miles between the Company access point associated with the station utilizing Dedicated Access Lines and the serving wire center associated with the called station. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2.

For inbound switched long distance services utilizing Special Access Termination, mileage measurements are based on the distance in airline miles between the serving wire center associated with the calling station and the Company access point associated with the station utilizing Dedicated Access Lines. Distance measurements are determined using the mileage calculation method shown in Section 3.4.2.
