Leaf No. 5
Revision: 0
Superseding Revision:

SECTION 3 - GENERAL DESCRIPTION OF SERVICE

3.4 Calculation of Distance, (Cont'd.)

3.4.1 Calculation Method for Private Line Services

The following steps describe the procedure for calculating mileage distances for private line services:

- Step 1: Obtain the "V" and "H" coordinates for the Company access points serving the originating and terminating locations.
- Step 2: Obtain the difference between the "V" coordinates. Obtain the difference between the "H" coordinates. The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the wire centers and/or access points.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
