

BELLSOUTH LONG DISTANCE, INC.

d/b/a AT&T Long Distance Service

New York Tariff No. 3 - Telephone

Effective Date: April 3, 2011

Section 8

Leaf No. 5

Revision: 0

Superseding Revision:

SECTION 8 - DEDICATED ACCESS SERVICE***8.2 Rate Elements, (Cont'd.)****8.2.2 Optional Features and Functions**

Optional Features and Functions provide for capabilities which may be added to a basic BellSouth® Dedicated Access service facility to improve its quality or utility to meet specific communications requirements. These are not necessarily identifiable with specific equipment, but rather represent the end result in terms of performance characteristics, which may be obtained. These characteristics may be obtained by using various combinations of equipment.

Although the equipment necessary to perform a specified function may be installed at various locations along the path of the service, they will be charged for as a single rate element.

(A) DS-0 Analog Service

When service is used for voice applications, signaling is typically required. Additionally, when service is used for data transmission, the Access Channels may require special conditioning (e.g. C-type and/or D-type conditioning).

(1) Signaling

Signaling capability provides for the process by which one Customer Premises alerts another customer premises on the service with which it wishes to communicate.

(2) Conditioning

Conditioning provides more specific transmission characteristics for analog DS-0 access services. C-Type conditioning controls attenuation distortion and envelope delay distortion. D-Type conditioning provides transmission characteristics suitable for data communications. D-Type conditional also provides for the control of "Signal to C-Notch Noise Ratio" and intermodulation distortion.

* This service has been grandfathered effective April 27, 2007. No new customers will be provisioned under this service after this date.
