

PSC NO 5 TELEPHONE  
Broadwing Communications LLC  
Initial Effective Date: June 17, 2006

Section: 5 Leaf: 10  
Revision 0  
Superseding Revision 0

## SECTION 5: LOCAL EXCHANGE SERVICE

### 5.7 ISDN Primary Rate Interface (PRI) Service (cont'd.)

#### 5.7.2 Optional Features for Circuit Switched Voice and Circuit Switched Data Services

##### A) Backup "D" Channel Arrangement

Provides backup for a primary "D" channel under those circumstances where multiple ISDN

Prime connections share a "D" single channel. A predetermined "D" channel on another PRI connection would automatically take over call control and signaling functions.

	<u>Monthly Recurring Charge</u>	<u>Non Recurring Charge</u>
D-Channel	\$50.00	\$50.00

##### B) System Intercommunication Service

Allows Focal ISDN PRI "B" channels to connect to a Centrex business system or another Focal ISDN PRI that originates in the same central office. This feature is offered on a per trunk group basis only.

Rate: Individual Case Basis (ICB)

##### C) Call by Call for FX and Tie Lines

Allows Foreign Exchange (FX) and Tie Line calls to be directed to and originated from ISDN PRI "B" channels. This provides Call by Call service selection for incoming and outgoing Circuit Switched and Private Facility services.

Rate: Individual Case Basis (ICB)

##### D) 2B Channel Transfer

Allows the Customer's CPE to more efficiently use PRI trunk connections for ISDN calling.

If an inbound call is forwarded or transferred using two channels in a PRI, the channels that were used to make the connection can be dropped and made available to future calls.

<u>Monthly Recurring</u>	<u>Non-Recurring</u>
\$75.00	\$100.00
