## SECTION 6: LOCAL EXCHANGE SERVICE OPTIONAL FEATURES

### 6.4 Digital Data Service

#### Description

Digital Data Service (DDS) allows customers to efficiently use PRI trunk connections for various data applications. Customers may utilize full 64K bandwidth of capacity on each B-channel.

When

a customer makes or receives a DDS call, the Company's switch recognizes the call as DDS and routes

it appropriately based on the route characteristic tables set up in translations.

The customer is responsible for insuring that the equipment at the customer's premise is capable of accepting PRI programming, able to perform channel bonding and capable to provide videoconferencing

(if necessary for the customer's application). The customer must also ensure that connections to the terminating location are capable of supporting 64k bandwidth transmissions. The Company will make available 64k bandwidth connections on its network. The customer must submit a forecast to the

Company if they wish to utilize DDS so that the Company can ensure proper bandwidth capabilities.

DDS is not available with calling cards. DDS is available on a one or two year term.

DDS is charged at a per channel/per minute rate. A single channel is measured as 64K. The 64K rate

should be multiplied times the number of channels needed for each data transmission.

#### Rates

	<u>1 Year</u>	<u>2 Years</u>
On Market	\$0.1225	\$0.1138
Off Market	\$0.1600	\$0.1520
Toll Free Service	\$0.1600	\$0.1520
