

PSC NO: 4 - Steam
Consolidated Edison Company of New York, Inc.
Initial Effective Date: 01/01/2009

Leaf: 96
Revision: 0
Superseding Revision:

SERVICE CLASSIFICATION NO. 4 - Continued
BACK-UP/SUPPLEMENTARY SERVICE

Common Provisions Applicable to Rate I, Rate II, Rate III, and Rate IV - Continued

Determination of Demand

The contract demand under this Service Classification shall be the contract demand as specified in the Customer's request for service hereunder (expressed in Mlb of steam per hour), unless and until a higher maximum demand is created by the Customer within the months of November through April, inclusive, in which case such higher maximum demand shall become the contract demand for that month and thereafter unless and until exceeded by a still higher maximum demand, which in turn shall likewise be subject to the foregoing conditions.

If the monthly maximum demand within the months of November through April, inclusive, exceeds the contract demand by 10 percent or less, a surcharge equal to 12 times the monthly contract demand rate for the excess in demand will apply to the monthly bill. If the monthly maximum demand within the months of November through April, inclusive, exceeds the contract demand by more than 10 percent, a surcharge equal to 24 times the monthly contract demand rate for the excess in demand will apply to the monthly bill. The surcharges shall not be applicable to any portion of the increased contract demand attributable to a colder-than-design weather variable. The "weather variable" consists of the weighted average of the temperature at the peak hour (80% weighting) and the average temperature over the preceding 24 hours (20% weighting). "Design weather" is defined as a weather variable of 5 degrees F. If a Customer's peak demand for a month exceeds the contract demand and the weather variable for the customer's peak hour is colder than the design weather, the Company will apply a factor based on the slope of the Company's steam system's design demand curve for that winter period to determine what the customer's peak demand would have been for the design weather. The surcharge shall apply only for that amount, if any, by which the design weather-adjusted Customer peak demand exceeds the contract demand.

A Customer applying for service under this Service Classification for the first time is required to establish an initial contract demand on the basis of a reasonable estimate provided by a professional engineer retained by the Customer. The estimate is subject to the Company's approval. In the event that such initially-established contract demand is exceeded, or a higher demand is later specified by the Customer, for any month within the months of November through April, no retroactive surcharge will be imposed, but such higher maximum demand shall become the contract demand for that month and thereafter ("Revised Contract Demand"). In the event that the Revised Contract Demand is exceeded thereafter by a still higher demand, the provisions included in the first two paragraphs under this Determination of Demand provision for this Service Classification will be applicable.

Whenever service is terminated to a Customer's premises and the same Customer applies for, and receives, service at the same location, within what would have been the same billing period, but for the termination of service, the maximum demand for the billing period will be determined as though there had been no termination of service.
