Superseding Revision:

direct outward dial (DOD) trunks to create two-way trunks that can receive and generate calls.

A DTS port is a connection that does not include the facility between the Customer's Premises and the DTS serving office. The connection is made using either a Digital Transport Service Loop component or a Company-offered transport facility purchased separately and must be at a minimum DS1 level. The transport and the Digital Transport Service must be billed to the same customer of record.

Flat Digital Transport Service Usage- An optional usage plan which provides for unlimited, flat rate local calling within the Customer's local calling area with no usage sensitive charges applied. Customers who choose the Flat digital Transport Service Usage option will pay a flat monthly rate in lieu of usage sensitive charges.

Direct Inward Dialing (DID) Numbers- Provides telephone numbers for direct inward dialing. Numbers are available in blocks of ten. The assignment and sequence of the numbers may be requested by the Customer in cases where the Company has the number of series of numbers available for use.

7.3.3 Application of Rates and Charges

(A) Term Pricing Plans

Term Pricing Plans (TPP) are available to the customer in addition to the Month-to-Month option. The customer must select either a Month-to-Month, 12 Month, 24 Month, 36 Month, 48 Month or 60 Month Term

(B) Modifying Term Pricing Plans

A TPP may be modified when additional DTS circuits are purchased. The customer may include any additional circuits in an existing TP if the customer renegotiates their term for a period of time equal to or greater than the time remaining on the existing TPP.
