SECTION 6 - MISCELLANEOUS SERVICES

N. CONNECTION OF COMMERCIAL MOBILE RADIO SERVICE PROVIDERS TO E911 SERVICES

1. SERVICE DESCRIPTION

- A. The service provides connection between a CMRS's network and the Company's Universal Emergency Number Service – 911 (hereafter referred to as "911 service") network. This service is used by the CMRS exclusively to route calls from the CMRS's customers trying to access emergency 911 service. One service arrangement is available:
 - (1) The Feature Group D (FGD) service arrangement will allow the wireless provider to pass wireless 911 calls with voice and P-ANI to the ALLTEL E911 tandem, for delivery to the PSAP. The service can be Callpath Associated Signaling (CAS) or Non Callpath Associated Signaling (NCAS). If NCAS is used, the CMRS provider will need to establish links to the ALI hosts to dynamically provide the P-ANI and mobile directory number (MDN) of the caller for each wireless 911 call. These NCAS links described above are not a part of this tariff.
- B. The Company's 911 tandem switch will receive a Pseudo Automatic Number Identification (P-ANI) signal from the CMRS. The Company's 911 tandem switch (established as part of an Emergency Reporting Service elsewhere in this tariff) will use the P-ANI to direct the 911 call to a Public Safety Answering Point (PSAP predetermined by the CMRS provider and the PSAP.
