

PSC No: 16 - Gas
 Rochester Gas and Electric Corporation
 Initial Effective Date: January 1, 2005
 Issued under the authority of the PSC in Case Nos. 03-E-0765 and 03-G-0766, Joint Proposal dated August 20, 2004

Leaf No. 127.46
 Revision: 0
 Superseding Revision:

GENERAL INFORMATION

11. WEATHER NORMALIZATION ADJUSTMENT (WNA) (cont'd)

B. Calculation of the WNA (Cont'd):

- (d). "AHDD" or Actual Heating Degree Days are the actual difference between sixty-five degrees (65°) Fahrenheit and the average of the minimum and maximum temperature as reported by the Rochester National Weather Service station for a particular day. AHDD is zero (0) when the average temperature is equal to or greater than sixty-five degrees (65°) Fahrenheit. AHDD is also used to refer to the cumulative AHDD for any defined period greater than one (1) day.
- (e). "BP" or Billing Period is the actual number of billing days that occur during the WNA season.
- (f). "BLT" or Base Load Therms is the estimated number of non-temperature sensitive therms per day. The estimate is based on the average daily use in the July and August billing months. If the customer has insufficient billing history to calculate the BLT, the average BLT for the applicable service class will be used. The service class average BLTs will be revised annually.
- (g). "DDF" or Degree Day factor is the estimated number of temperature sensitive therms required for each heating degree-day. If the customer has insufficient billing history to calculate the DDF, the average DDF for the applicable service class will be used. The service class average DDFs will be revised annually.
- (h). "Therms_{Normal}" is the estimated number of therms the customer would have used if the weather were normal during the billing cycle.
- (i). "Therms_{Actual}" is the number of therms the customer actually used during the billing cycle.
- (j). "Therms_{Normal(n)}" is the number of Therms_{normal} that fall in the applicable rate block.
- (k). "ThermsActual_(n)" is the number of Therms_{Actual} that fall in the applicable rate block.
- (l). "WNA_n" is the weather normalization adjustment for the applicable rate block and is expressed in dollars.
- (m). "R_n" is the applicable block rate and is expressed in dollars per therm.
- (n). "WNA_{total}" is the customer's weather normalization adjustment and is expressed in dollars.
