

PSC No: 120 - Electricity  
New York State Electric & Gas Corporation  
Initial Effective Date: February 1, 2004

Leaf No. 283  
Revision: 1  
Superseding Revision: 0

SERVICE CLASSIFICATION NO. 11 (Continued)

**Electrically Isolated Loads: (Cont'd.)**

c) if the Company discovers, through billing data and/or the inspection of the customer's OSG facilities, that any of the electrically isolated OSG facilities have been reconnected to NYSEG's system, the Company will backbill the customer. A contract demand will be established by the Company and the backbill will consist of NYSEG's standby service rates, applied back to the time of OSG interconnection to NYSEG's system, and include the surcharge as set forth below in the Unauthorized OSG Interconnection by Customer section, with Late Payment Charges as applicable, set forth in the Terms of Payment section of this Service Classification.

A facility shall be considered "electrically isolated" if: (a) the electrical points of contact where interconnection with the Company could occur are separated and at least 100 feet from any other interconnected electrical service utilized by such customer, or (b) the isolated service is not within the same building or structure as any other interconnected electrical service of the customer and not housed within a common enclosure with other interconnected breakers and/or fuses of the customer. At its discretion, the Company may consider a separation of less than 100 feet between a customer's facilities and the Company's system to be electrically isolated if there are site-specific configuration circumstances warranting such a determination.

**Compliance:**

A customer taking standby service shall comply with all federal, state and local laws, regulations, and requirements, including the requirements listed below in the Interconnection Requirements paragraphs 1 through 8.

**STANDBY SERVICE NOT APPLICABLE TO:**

**1a. Residential Photovoltaic Power Producing Facilities**

Standby service will not apply to a residential customer with photovoltaic generation ten (10) kilowatts or less, provided such customer meets criteria for service under the Residential Solar Electric Service Option, found in the Special Provisions of Service Classification Nos. 1, 8, and 12 of this Schedule.

**1b. Farm Waste Electric Generating System Option**

Standby service will not apply to a customer taking service under the Farm Waste Electric Generating System Option, provided such customer meets criteria for service under General Information Section 22 of this Schedule.

**2. Emergency Generators**

Standby service rates shall not apply to customers whose only generating units are emergency generators. For the purpose of this Service Classification, a generating unit must meet each of the following two criteria to be considered an emergency generator:

- a) The emergency generator is used exclusively for purposes of supplying electrical power to the Customer when electrical power is not available from the Company.
- b) No load is served by the emergency generator while electric service is available from the Company to the premises, except for regularly scheduled tests when the generator is required to operate under load or participation in the NYISO's Special Case Resource Program or the Emergency Demand Response Program.

Issued in compliance with orders in Case No. 02-E-0779 dated 07/30/03 and Case No. 03-E-1552 dated 11/28/03.
