

PSC No: 120 - Electricity  
New York State Electric and Gas Corporation  
Initial Effective Date: December 1, 2003

Leaf No. 240  
Revision: 0  
Superseding Revision:

SERVICE CLASSIFICATION NO. 7 (Continued)

**SPECIAL PROVISIONS: (Cont'd.)**

(d)(7) Power for Jobs: (Cont'd)

Calculation of Billing Demand:

NYPA Billing of PFJ Demand:

The NYPA provided portion of the customer's metered peak demand shall be calculated as the product of multiplying the appropriate Billing Ratio by the current month's maximum metered demand.

In no case shall the NYPA Billing Demand exceed 100% of the NYPA Contract Demand, or Adjusted NYPA Contract Demand, as appropriate.

Non-NYPA Billing Demand:

The portion of the customer's metered peak demand ("Non-NYPA Peak") to be billed at standard S.C. No. 7 rates will be calculated by subtracting the above determined NYPA provided portion of the customer's metered on-peak demand from the customer's actual metered on-peak demand.

Calculation of Billing Energy:

NYPA Billing of PFJ Energy:

The portion of the customer's monthly metered on-peak and off-peak energy to be billed at the PFJ rates will be the product of the appropriate Billing Ratio times both the customer's metered on-peak energy and off-peak energy.

Non-NYPA Billing of Energy:

The portion of the customer's monthly metered on-peak and off-peak energy to be billed at standard S.C. No. 7 rates shall equal metered on-peak energy and off-peak energy minus the portion identified above as billed at PFJ rates.
