GENERAL INFORMATION – Continued

63. Firm Gas Demand Response (“DR”) for Commercial, Industrial and Multi-Family Customers - Continued

“Demand Response Event” or “DR Event” means a period of time during the Demand Response Season for which the Company, upon not less than twenty (20) hours’ notice to Customer (i.e. by 8AM the mornings prior to when the reduction must occur), shall indicate that Customer must curtail Customer’s consumption of natural gas in accordance with the Agreement. Customers must curtail Customer’s consumption of natural gas in accordance with the Program and specific Program Option chosen. Demand Response Events will be called for days when the Company forecasts the low temperature measured at either Republic Airport or LaGuardia Airport will be at or below 10 degrees Fahrenheit

“Demand Response Season” or “DR Season”, also known as Winter Capability Period, means the period during which Customer is participating in the Program, beginning on November 1 and ending on March 31, inclusive.

“Design Day” is a 24-hour period of peak demand which is used as a basis for planning gas capacity requirements.

“Design Hour” is the peak hour of a Design Day.

“Direct Load Control (DLC)” The presence of a communications device which allows the Company to remotely switch Customers’ gas load to an alternate fuel, or any other set-up that gives the Company remote control of gas equipment.

“Exempt Resource” is a backup energy source that uses the following alternative options to generate thermal energy: Electricity-based technologies (including heat pumps), biodiesel/biofuel blends that contain ten percent or more biodiesel by volume, solid biomass fuels (including pelletized wood except in NYC, municipal solid waste), alcohols (ethanol or methanol), hydrogen, renewable natural gas or any resource or combination of resources listed as a Renewable Energy System under the New York State Climate Leadership and Community Protection Act.

“Event Performance” means the comparison of an account’s actual consumption during the event window against its calculated weather-adjusted baseline for the aggregate usage over the entire event window.
