### 3. INTRASTATE INTEREXCHANGE SERVICES

#### 3.2 SERVICE OPTIONS

##### 3.2.18 Option 18 (Allnet Multipoint<sup>SM</sup> 800)

Allnet Multipoint<sup>SM</sup> 800 Service is a shared, inward switched service which permits inbound calls, originated by dialing an 800 number to terminate at a Multipoint<sup>SM</sup> 800 customer's common line (i.e., business line), provided a valid personal identification routing number (PIRN) is entered by the caller. The Multipoint<sup>SM</sup> 800 customer is billed for the calls rather than the call originator. Multipoint<sup>SM</sup> 800 intrastate service is only available in conjunction with Multipoint<sup>SM</sup> 800 interstate service. Multipoint<sup>SM</sup> 800 service completes calls to a Carrier assigned 800 telephone number. The PIRNs entered by the caller determine the customer designated telephone number to which the 800 call will terminate. Each Customer may request any combination of the four-digit PIRNs, excluding the PIRNs reserved for special use by the Company. Multipoint<sup>SM</sup> 800 service employs shared 800 telephone numbers and, by conversion to Multipoint<sup>SM</sup> 800 service, the Multipoint<sup>SM</sup> 800 customer releases any ownership or exclusive rights of its 800 telephone number to the Carrier. Under the non-validated option, Multipoint<sup>SM</sup> 800 customers may receive inbound Multipoint<sup>SM</sup> 800 calls even if the calling party enters no PIRN or an incorrect PIRN. Under the validated option, the Multipoint<sup>SM</sup> 800 customer may receive Multipoint<sup>SM</sup> 800 inbound calls only when the correct PIRN is entered by the calling party.
