Revision: 0  
Superseding Revision:

### 3. INTRASTATE INTEREXCHANGE SERVICES

#### 3.4 ANCILLARY CHARGES

##### 3.4.5 Allnet MobileLine Service

Allnet MobileLine Service is an ancillary service offering which permits cellular customers to access and route to Carrier for their transmission and reception, voice, data, and other types of telecommunications services. Allnet MobileLine Service is available to all Carrier customers in MobileLine geographically serviceable areas and is only available in conjunction with interstate Allnet MobileLine service. Allnet MobileLine service is comprised of the following charges: a cellular connection charge (CCC), and long-distance charges. The CCC applies to all calls that originate or terminate to a MobileLine subscribed cellular telephone and is applied only on completed calls from the time that the originating party completes dialing the telephone number. In addition to the CCC, long distance charges may apply and are for Carrier on-net calls (call to a land line telephone or to a cellular telephone outside the cellular telephone's home LATA). All MobileLine service calls are billed in one-minute increments in a one minute minimum.

Long distance charges are standard Solution II rates. If a MobileLine customer is also a customer of a land line accessed Carrier product, those MobileLine customers making cellular calls equal to the Allnet Access will be assessed long distance charges equal to the Allnet Access rates based upon their associated land line Carrier product.
