## **1 Unbundled Network Elements (UNE) (Cont'd)**

### **1.7 Ports (Cont'd)**

#### **1.7.2 Regulations (Cont'd)**

- c. The Customer is responsible for providing sufficient and accurate information at the time the line port is ordered to allow The Company to accurately populate the 911 database. The Customer is also responsible for providing information updates, where appropriate, should the 911 address associated with the line port change. The Company shall not be held responsible when inaccurate information is provided, or timely updates are not furnished.

#### **1.7.3 Analog Line Port**

The analog line port provides a 2-wire interface to the local switch. The analog line port provides access to the functions and capabilities of the local switch, including line supervision dial tone, ringing, digit reception and interpretation, a network address (the local directory number) billing recording, the ability to pre-subscribe to a primary carrier of interLATA and, where available, intraLATA toll and Region to Region calls.

#### **1.7.4 Digital Port**

A network entry or exit point using digital services.

### **1.8 BRI ISDN**

#### **1.8.1 General**

Basic Rate ISDN provides the digital central office termination via a Basic Rate Interface that has the potential to support digital transmission of voice and data to end user's premises.
