## **GENERAL INFORMATION**

## 24. STANDBY SERVICE AND STANDBY SERVICE RATES (Continued)

## 24.5 OTHER PROVISIONS (Continued)

- (F) (Continued)
  - (5) Billing Applicable to Each Account Supplied by the Generating Facility's Output (Continued)
    - (b) Each account supplied by the generating facility's output will be billed under Standby Service Rates, as modified below.
      - (i) An additional Customer Charge of \$50.00 per account per billing period, exclusive of the Increase in Rates and Charges, will be applicable to cover incremental billing and administrative costs associated with providing service under this provision.
      - (ii) The per-kWh delivery charges and adjustments described in RATES MONTHLY of the customer's Service Classification will be applied to the total kWh registered on the account's meter(s) reduced by the Allocated Generator Supply for each 15-minute interval (adjusted for losses where applicable).
      - (iii) For each 15-minute interval, the registered demand on the account's meter(s) will be reduced by the Allocated Generator Demand for purposes of determining the daily maximum demand that is used for billing as-used daily demand Delivery Charges.
      - (iv) Monthly Communications Service Credit: Each Standby Service account will receive a credit of \$19.84 to reimburse the customer for maintaining the communications service if the Company would have otherwise been required to maintain the communications service.
    - (c) The Allocated As-Used Generator Demand and Allocated Generator Supply will be assumed to be zero for time periods where there is insufficient interval data available to ascertain that the generating facility supplied output to any associated Standby Service account.

Bills may be estimated pursuant to General Information Section 7.4 (B). If interval data is estimated on a Standby Service account, that data will be used in the calculation of Allocated As-Used Generator Demand for all other accounts. If the actual data later becomes available, the account will be rebilled based on the actual registered demand on the meter less the previously determined Allocated As-Used Generator Demand for such account.
