SECTION 5 – SUPPLEMENTAL SERVICES (cont'd)

5.1 CUSTOM CALLING SERVICE (cont'd)

5.1.2 Description of Features (cont'd)

f. Automatic Busy Redial

This service allows a customer to automatically redial the telephone of the most recent incoming call. This feature works only with calls placed within a common central office switch. The customer activates the feature using a touch-calling phone. If the called number is busy, the call will be attempted for a maximum of 30 minutes without tying up the called party's telephone. When the called party's telephone line becomes idle and the customer's line is available to complete the call, then a distinctive ringing signal will alert the customer that the call can be completed. When the customer picks up the telephone after the ring back signal, the call is automatically dialed to the called party. The customer may place and receive regular calls while the busy line is being monitored.

g. Do Not Disturb

Do Not Disturb (DND) allows a customer to prevent incoming calls from ringing their line by diverting them to a tone or recorded announcement (determined by Company facility specifications). A personal identification number (PIN) is provided to the customer, which will override the DND feature and allow the call to ring to the premises.
