GENERAL INFORMATION (Cont'd)

II.36. WEATHER NORMALIZATION ADJUSTMENT

The rates for gas service to all customers under SC 1, SC 2, SC 3, SC 4, SC 5 and SC 9 shall be subject to a Weather Normalization Adjustment to reflect the impact of degree day variations from normal levels, as determined on a revenue month basis, for the months of October through May, inclusive.

The monthly volume deviation shall be computed for each billing period for which adjustment is made using the formula described below. The weather adjustment is made by adding to or subtracting from the Customer's bill the amount determined by multiplying the Customers consumption during the billing period by the weather adjustment factor.

$$WA = \frac{(R * DDF * (NDD - ADD))}{(BL + (DDF * ADD))}$$

where, WA = Weather adjustment factor, \$/Mcf
 DDF = Average degree day factor, Mcf/degree-day
 BL = Average base load, Mcf
 ADD = Actual degree days for the billing period
 NDD = Normal degree days for the billing period
 R = Tailblock margin by service class
