

P.S.C. No. 7 Electricity
City of Jamestown
Effective Date: September 1, 2018

Leaf: 133
Revision: 0
Superseding Revision:

**SERVICE CLASSIFICATION NO. 7
HIGH DENSITY LOADS
INDIVIDUAL NEGOTIATED CONTRACT**

APPLICABLE TO USE OF SERVICE FOR:

All uses by existing or new customers that fall under the classification of "High Density Loads" (HDL). HDL Customer loads have a high "Energy Use Intensity" (EUI). EUI is defined as the annual kilowatt-hours of Energy usage divided by the operating space square footage used by the Energy consuming activity as determined by the Utility. HDL customer classification shall include:

- a. any new or existing customers where the requested EUI exceeds 250 kWh/ft²/year; and
- b. the maximum demand used or requested by the customer exceeds 300 kW.

When calculating an EUI, the Utility may make reasonable assumptions and projections as necessary to estimate Energy usage and square footage based on the Customer's application, data regarding similar operations, and other sources. An entity otherwise subject to this rate schedule will be excluded from this schedule if the entity demonstrates to the Utility's reasonable satisfaction, or the Utility determines on its own initiative, that the EUI of the subject facility is less than 250 kWh/ft²/year.

CHARACTER OF SERVICE:

Continuous alternating current, 60 cycles, at any standard voltage and phase arrangement as specified in Section 2 (a) of the Rules and Regulations.

Customers taking service hereunder must contract for the location, quantity and character of service required. On Customer's application, Utility will specify the type or types of service available and appropriate for Customer's requirements.

RATES:

Rates will be paid as negotiated and as specified in each Individual Negotiated Contract.

MONTHLY CUSTOMER CHARGE:	\$600.00
DEMAND: For qualifying load	As specified in Customer's Individual Negotiated Contract
ENERGY: For qualifying load	As specified in Customer's Individual Negotiated Contract
REACTIVE POWER: For each KVA of reactive demand in excess of 1/3 KVA per kW of measured demand, per R-KVA	\$0.30
