Consolidated Edison Company of New York, Inc.
Initial Effective Date: 03/02/2019

Leaf: 11
Revision: 1
Superseding Revision: 0

PASNY DELIVERY SERVICE

General Provisions

Determination of Billable Demand

The Company will install a demand measuring device of a type approved by the Public Service Commission for the determination of the maximum demand (as defined in General Rule 10.4 of the Schedule for Electricity):

- (1) if it is determined that the PASNY Customer is using, or might use, more than 10 kW of maximum demand; or
- (2) if the PASNY Customer's consumption exceeds 3,000 kWhr per month in 2 consecutive months or 6,000 kWhr in a bi-monthly period provided, however, that the Company may cease to meter the demand if the demand recorded in each of the previous 12 months has not exceeded 10 kW.

An Interval Meter is required for service under Rate II, Rate III, and Rate IV. For service under Rate III and Rate IV, such Interval Meter may include equipment either to prevent reverse meter registration or to separately measure electricity generated by the PASNY Customer and electricity delivered by the Company.

With respect to the determination of demand for public buildings of The City of New York and subject to Special Provision 5 hereof, the maximum demand used to compute the bill to PASNY shall be the total of the recorded and calculated demands for all such public buildings receiving delivery service under this Rate Schedule. Where a demand meter is not required in premises served by the Company, the determination of the monthly maximum demand for those premises shall be calculated by dividing the total energy consumed in kilowatthours by 180, except that when such calculated demand exceeds 10 kilowatts, a billing demand of 10 kilowatts shall be used.
