5.3 CENTREX SERVICE (Cont'd)

5.3.2 Description of Features

F. Distinctive Ringing

This feature enables a user to determine the source of an incoming call from a distinctive ring. The pattern is based on whether the call is from within the station group, external to the station group, forwarded from the attendant position, or from a station within the Call Waiting feature.

G. Distinctive Ringing / Call Waiting Tone (Centrex only)

This feature applies a distinctive ringing or call waiting tone that enables a user to determine the source of an incoming call. The pattern is based on whether the call is from within the station group, external to the station group, forwarded or extended from the attendant position, or from a station within the Call Waiting feature.

H. Regular Multiline Hunting

This feature is a line hunting arrangement that provides sequential search of available numbers within a multiline group.

I. Circular Hunting

This feature (similar to regular hunting) is a line hunting arrangement that allows all lines in a multi-line hunt group (MLHG) to be tested for busy, regardless of the point of entry into the group. When a call is to a line in a MLHG, a regular hunt is performed starting at the station associated with the dialed number. It continues to the last station in the MLHG, then proceeds to the first station in the group and continues to hunt sequentially through the remaining lines in the group. Busy tone is returned if the original called station is reached without finding a station that is idle.

J. Speed Calling (Centrex only)

This feature allows a user to dial selected numbers using one and two digits. Up to eight telephone numbers may be selected.

K. Terminal Group and Station Restriction (Centrex only)

This feature defines a station's network access capability, either individually within a Centrex group, or for the group as a whole. It defines the Centrex group and what level of access a station will have; i.e. intragroup only, toll restriction, etc.
