INTRASTATE ACCESS SERVICE

6. Switched Access Service (cont'd)

6.1 General (cont'd)

6.1.3 Rate Categories (cont'd)

B. Originating End Office (cont'd)

1. Local Switching (cont'd)

Where end offices are appropriately equipped, international dialing may be provided as a capability associated with Local Switching which provides local dial switching for Feature Group D. International dialing provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard FGD equipped end office.

Rates for Local Switching are set forth in the Company's rate schedule.

There are four types of functions included in the Local Switching rates element: Common Switching, Transport Termination, Line Termination and Intercept. These are described in (a) through (d) following.

a. Common Switching

Common Switching provides the local end office switching functions associated with the Feature Group D switching arrangements. Included as part of Common Switching are various non chargeable optional features which the Customer can order to meet the Customer's specific communications requirements. These optional features are described in Section 6.7.1 following.
