## INTRASTATE ACCESS SERVICE

### 6. Switched Access Service (cont'd)

#### 6.5 Description and Provision of Feature Group D (FGD) (cont'd)

##### 6.5.3 Design and Traffic Routing (cont'd)

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment, and the Company traffic routing plans. If the Customer desires routing or directionality different from that determined by the Company, the Company will work cooperatively with the Customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service; except the Company will designate the first point(s) of switching and routing to be used where equal access is provided through a centralized equal access arrangement. Those company offices providing equal access through centralized arrangements are identified in NATIONAL EXCHANGE CARRIER ASSOCIATION, INC. TARIFF F.C.C. NO. 4.

##### 6.5.4 Measuring Access Minutes

Customer traffic to end offices will be recorded at end office switches or access tandem switches. Originating and terminating calls will be measured or imputed to determine the basis for computing chargeable access minutes. In the event the Customer message detail is not available because the Company lost or damaged tapes or incurred recording system outages, the Company will estimate the volume of lost Customer access minutes of use based on previously known values.

For originating calls over FGD the measured minutes are the chargeable access minutes.
