## INTRASTATE ACCESS SERVICE

### 6. Switched Access Service (cont'd)

#### 6.1 General (cont'd)

##### 6.1.1. Description and Provision of Switched Access Service Arrangements (cont'd)

###### A. Description (cont'd)

The provision of each Feature Group requires Local Transport facilities and the appropriate End Office functions.

There are three specific transmission specifications (i.e., Types A, B, and C) that have been identified for the provision of Feature Groups. The specifications provided are dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem. The parameters for the transmission specifications are set forth in Section 15.1.2 following.

Feature Group are arranged for wither originating, terminating, or two-way calling, based on the Customer end office switching capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the Customer designated premises. Terminating calling permits the delivery of calls from the Customer designated premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Company will determine the type of calling to be provided unless the Customer requests that a different type of directional calling is to be provided. In such cases, the Company will work cooperatively with the Customer to determine the directionality. There are various optional features associated with Local Transport, Common Switching and Transport Termination available with the Feature Groups. In addition, the Interim NXX Translation and Operator Transfer Service optional features are available with Feature Group D. Operator Transfer Services will be provided over FGD switched access service trunks from the operator service location to the Customer's premises.
