

PSC NO: 4 - Steam

Leaf: 98

Consolidated Edison Company of New York, Inc.

Revision: 5

Initial Effective Date: 11/01/2016

Superseding Revision: 4

Issued in compliance with Order in Cases 15-S-0523 and 16-S-0134 dated 09/21/2016

**SERVICE CLASSIFICATION NO. 4 - Continued
BACK-UP/SUPPLEMENTARY SERVICE****Special Provisions**

- A. Unless the steam service is physically disconnected each year during the months of November through April, inclusive, service will commence under this Service Classification when the other energy source has the ability to provide energy either contemporaneously with or in place of the steam service (e.g., the other energy source is connected to the utility's gas system, or there is a contract for fuel supply), whether or not the other energy source is in use.

Applicability of service under this Service Classification is subject to the following exemptions, commencing November 1, 2016:

- (1) A Customer who notifies the Company in writing that the total nameplate rating of its other energy source(s) used for the same purpose as Con Edison's steam equals no more than 15 percent of the Customer's maximum potential demand for steam served from all sources during the months of December through March will be billed prospectively under the Service Classification that would otherwise be applicable if the Customer did not have that other energy source.
- (2) A Customer who notifies the Company in writing that its only other energy source used for the same purpose as Con Edison's steam is a geothermal or solar thermal technology will be billed under the Service Classification that would otherwise be applicable if the Customer did not have that other energy source.
- (3) A Customer who notifies the Company in writing that its only other energy source used for the same purpose as Con Edison's steam is one of the Designated Technologies specified in General Rule 20.3.2 of the Company's Schedule for Electricity Service, except for geothermal or solar thermal technologies, will be billed prospectively, through the end of the electric Designated Technologies exemption period, under the Service Classification that would otherwise be applicable if the Customer did not have that other energy source.

Customers seeking one of the above exemptions must provide as part of their written notification: the total nameplate rating of the other energy source(s) in Mlb/hour; and the total maximum potential demand for steam in Mlb/hour, as documented in a Load Letter from a professional engineer.

Customers who are exempt pursuant to (2) or (3) above may make a one-time election in writing to be billed prospectively under this Service Classification, instead of the otherwise applicable Service Classification.
