Supersedes 0

SECTION 11 - EXPLANATION OF TERMS (cont'd)

DEFAULT ROUTING ("DR")

When an incoming E911 call cannot be selectively routed due to an ANI failure, garbled digits or other causes, such incoming calls are routed from the E911 Control Office to a default PSAP. Each incoming E911 facility group to the Control Office is assigned to a designated default PSAP.

DEMARCATIION POINT

The physical dividing point between the Company's network and the customer.

DIAL PULSE ("DP")

The pulse type employed by a rotary dial station set.

DEDICATED ACCESS CIRCUIT

Access facilities between the Customer's premises and the company point of presence which are used exclusively for the transmission of the Customer's calls using the Company's services.

DIGITAL

A method of storing, processing and transmitting information through the use of distinct electronic or optical pulses that represent the binary digits (bits) 0 and 1. Digital transmission/switching technologies employ a sequence of discrete, individually distinct pulses to represent information, as opposed to the continuously variable signal of analog technologies.

DIGITAL SERVICE (DS)

Hierarchy of digital signal speeds used to classify capacity of lines and trunks.

DIRECT INWARD DIAL ("DID")

A service attribute that routes incoming calls directly to stations, by-passing a central answer point.

DIRECT OUTWARD DIAL ("DOD")

A service attribute that allows individual station users to access and dial outside numbers directly.
