I. Mobility Package

1. Description

The Mobility Package includes features that allow Customers to be highly mobile while still connected to their Business Voice Service phone lines. The package includes the following features: (T)

- Simultaneous Ring – Allows Customers to have multiple phone numbers ring simultaneously when calls are received on their Business Voice Service phone. The first line to answer will be connected and the other lines will be released. If any line goes to voicemail then the other lines will be released. The Customer can have up to five (5) additional terminating locations, including non-Company numbers, in addition to their main line. Telephone numbers must be a 10-digit domestic telephone number. (T)
- Sequential Ring – When the Customer's phone is called, this feature rings up to five (5) additional phone numbers in sequence. The initial phone number will ring and after a preset number of rings the next phone number will ring and then the next numbers until the call is picked up or the call goes to voicemail or other no-answer processing from the main number. The caller can wait until the call is answered or leave a message at any point by pressing a key on their handset.

If any of the lines are answered while ringing (including voicemail) then the Sequential Ringing will stop and the call can be completed. If no lines are answered then the call is sent back to the main line for processing (Voicemail, CFNA, etc.).
