Section 7 - BUSINESS NETWORK SWITCHED SERVICES (Cont'd)

7.2 SERVICE DESCRIPTIONS AND RATES (Cont'd)

7.2.3 PBX Trunk Service (Cont'd)

A. General (Cont'd)

Outward-only service provides for one-way calling from the customer-premises equipment to the central office switch. Depending on how the customer programs its system to route calls, a vacant outgoing line can be accessed either directly from the calling line (called DOD, for Direct Outward Dialing, typically invoked by dialing "9"), or from the attendant position (called non-DOD). Incoming calls cannot be received over a trunk with outward-only service.

Combination service provides for two-way calling between the central office switch and customer-premises equipment. Depending on how the customer programs its system to route calls, inward calls can be either DID or non-DID, and outward calls can be either DOD or non-DOD. Since most combination trunks provide for DID and DOD calling, and they are often referred to as DIOD (Direct Inward/Outward Dialing) trunks.

For DID configured PBX trunks additional charges apply for Direct Inward Dial Station numbers.

Each DS0 level Trunk has the following characteristics:

Terminal Interface:	2-wire or 4-wire, as required for the provision of service
Signaling Type:	Loop, Ground, E&M I, II, III
Pulse Type:	Dual Tone Multi-Frequency (DTMF) or Dial Pulse (DP)
Calling Direction:	One-way inward-only, one-way outward-only, or two-way inward and outward
