Section 6 - RESIDENTIAL NETWORK SWITCHED SERVICES

6.1 GENERAL

Residential Network Switched Services provide a residential customer with a connection to the Company's switching network which enables the customer to:

- A. place and receive calls from other stations on the public switched telephone network;
- B. access the Company's local calling service;
- C. access the Company's operators and business office for service related assistance; access toll-free telecommunications services such as toll-free NPA; and access 911 service for emergency calling; and
- D. access the service of providers of interexchange service. A customer may presubscribe to such provider's service to originate calls on a direct dialed basis or to receive toll-free service from such provider, or may access a provider on an ad hoc basis by dialing the provider's Carrier Identification Code (10XXX). At the time of initial subscription, the customer shall designate a Primary Interexchange Carrier (PIC) for intra-LATA and inter-LATA toll service. If the customer does not select an intra-LATA PIC, and does not request blocking of intra-LATA toll calls, the Company shall be deemed to have been designated as the customer's intra-LATA PIC.
- E. if a Customer uses any of the Company's services to provide a chatline-type service or any other content-type service, such service must be provided using a blockable NXX within the serving LATA. The blockable NXX shall only be able to receive intraLATA calls.
