Section 5 - SUPPLEMENTAL SERVICES (Cont'd)

5.16 FRAME RELAY SERVICE (FRS)

5.16.1 Service Description

The Company provides Frame Relay Service (FRS) with transmission speeds of 56 Kbps to 1.544Mbps in 64Kbps increments. All services are generally available from Adelphia TelCove Operations, Inc. as specified herein.

Employing digital technology, FRS provides high speed access and throughput to and among Local Area Networks (LANs), as well as computers. Utilizing statistical multiplexing, FRS enables users to allocate circuit bandwidth to applications as needed, up to the maximum bandwidth purchased, rather than assigning fixed channels to specific applications. FRS supports transmission speeds up to 44.736 Mbps.

FRS requires the use of customer terminal equipment that functions as a multiplexer/bridge/router. This terminal equipment must be purchased separately from the FRS and must conform to CCITT and ANSI standards. The terminal equipment accumulates customer data and puts it into a frame relay format suitable for transmission over the TelCove Operations, Inc. network.
